

Arturia's Plate 140- Vintage Reverb virtual instrument has been designed to recreate the classic sound of a vintage spring reverb for creative and authentic guitar and synth tones. We use only the best reverb technology, including high resolution convolution processors, which can produce up to 256 different impulses. This allows for an amazing reproduction of any reverberant environment such as rooms, cathedrals and concert halls. The original Plate 140 was an amplifier with a built-in spring reverb effect that would become popular in the late 1960s and early 1970s. The tube-driven, spring reverb design is what made the Plate 140 so unique and desirable. It made for a warm and thick sound, which was highly sought after by guitarists and bass players in particular. The Plate 140 was discontinued in the early 1970s but we have carried on its heritage with this virtual instrument. The Plate 140V Vintage Reverb plug-in combines this authentic sound with a modern interface that gives you total control over how your instrument will reverberate. This powerful combination will give you a truly professional sound. Close your eyes and let yourself be transported back in time to the golden era of rock by using the Plate 140 Vintage Reverb from Arturia. Arturia Software Technology SRL Registered in Bucharest, Romania, with Companies House on 9th May 2007, Romania Registration Number 140/2596/2007.
